

MaaS360 Platform Overview

One Window. One System. All Your Devices.

Enterprise mobility expectations have changed forever. IT organizations need greater visibility and control over the mobile devices that are entering the enterprise, whether they are employee-owned or provided by the company. The MaaS360 platform offers something no other vendor does; true software-as-a-service (SaaS) that delivers instant enterprise mobile device and application management. From smartphone and tablets to laptops and desktops, MaaS360 provides a comprehensive solution to:

- Visualize the entire mobile computing environment
- Manage users, devices, and apps across the enterprise
- Secure corporate data and enforce compliance

Built on a secure, multi-tenant architecture, MaaS360 is available instantly to begin managing devices and apps in just minutes with the ability to tightly integrate into existing enterprise systems. And because there are no servers to install, customers are kept up to date and able to manage the latest technology without the need for costly change management exercises.

Secure Your Devices

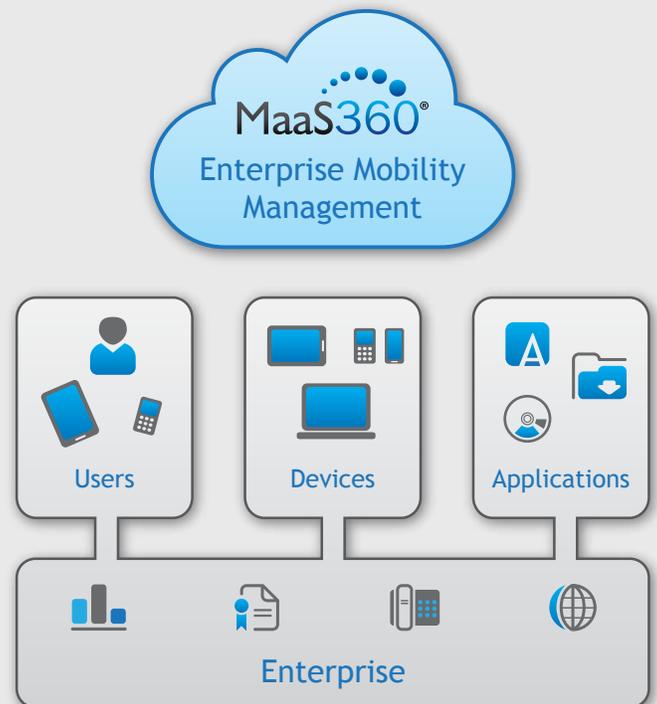

MaaS360 provides multi-platform support for iOS, Android, Symbian, BlackBerry, and Windows Phone smartphones and tablets, as well as Windows and Mac laptops. All these devices can be managed through a single console accessed anywhere through a web browser.

Leverage the Cloud

Because MaaS360 is a SaaS solution, it does not require you to install servers, deal with complex configurations, or provide ongoing maintenance. Deployment is quick and easy, and in just a few clicks, you get instant visibility and control.

Embrace Mobility

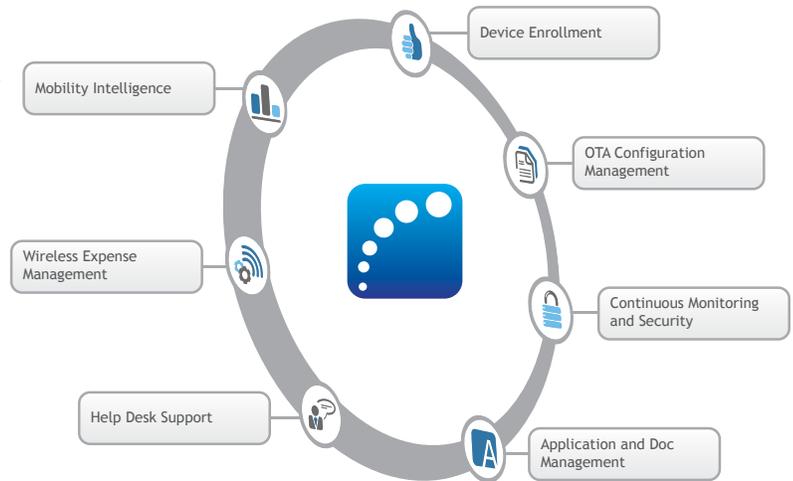

The mobile market changes fast and employees demand the latest and greatest technology. With MaaS360, you can stay ahead of the curve and embrace technology trends such as employee-owned devices, mobile apps or the latest smartphone or tablet to hit the market.

MaaS360 Platform Overview

Complete Lifecycle Management

With an intuitive interface and easy-to-use workflows, MaaS360 enables you to support the entire enterprise mobility lifecycle on the widest range of devices. Everything from enrollment to configuration management, compliance and security, app and document management, help desk support, expense management, and reporting is fully integrated. This centralized approach cuts device management time to a minimum, and offers maximum visibility of activity and status.

MaaS360 provides a complete set of capabilities to get devices configured for enterprise access and make sure corporate data stored on these devices is safe, regardless of ownership. This includes OTA configuration, passcode enforcement, encryption, jailbreak detection, device location, usage threshold alerts, remote lock, selective wipe, continuous monitoring, and automated enforcement, and more.

Instant Enterprise Mobility

MaaS360 is delivered as a true SaaS solution for mobility with comprehensive enterprise device and application management capabilities. This approach leverages the agility of the cloud to meet to the pace of change in mobility. MaaS360 is instantly available, automatically updated, and provides unmatched affordability.

Web-Based Management Console

MaaS360 provides a single console for managing device enrollment, configuring compliance rules and alerts, setting up and assigning policies, viewing interactive dashboards and reports, and conducting advanced searches.

Enterprise Infrastructure Integration

The MaaS360 Cloud Extender seamlessly integrates with your existing infrastructure such as Microsoft Exchange, Office 365, Lotus Notes Traveler, BlackBerry Enterprise Server, Active Directory, and any required certificate authorities.

Advanced Device Integration

MaaS360 also offers advanced management and security capabilities for iPhones, iPads, and Androids, as well as Windows and Mac based laptops and desktops using a lightweight agent or management profiles.

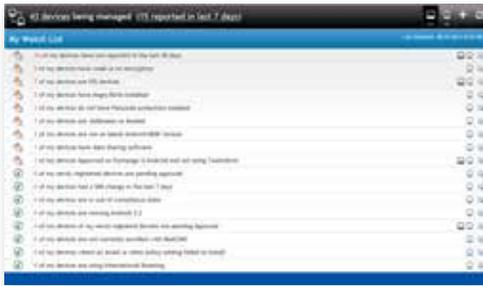

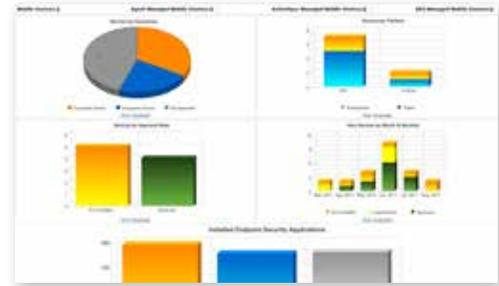

MaaS360 Platform Overview

Actionable Insights

MaaS360 collects and displays data about your mobile environment in a variety of different formats. Effective decisions are always based on good data and MaaS360 provides complete visibility. Whether viewing details directly in the console or taking advantage of export capabilities or web service APIs, administrators can rest assured that they always have the most up to date information about their devices, users, and apps.

Mobility Intelligence

MaaS360 has a history of delivering rich and robust graphical reporting. This Mobility Intelligence will provide administrators with an overarching view of the entire device population. These reports are a resource for reporting upward in the organization, planning changes, and looking for gaps. Begin with the high-level reports to get an overview of your enterprise, then drill down to see the details.

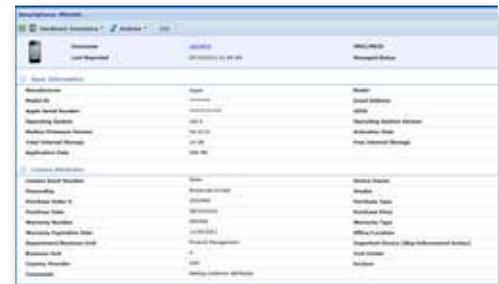

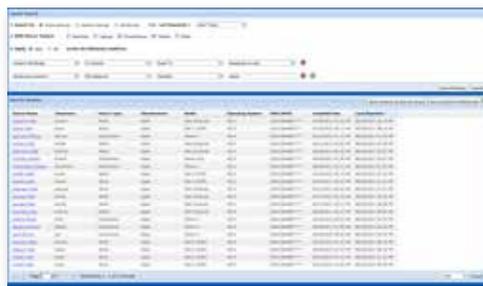

My Watch List

The MaaS360 Watch List allows administrators to keep a proactive eye on the devices under management. With default Watch List items and full customization available, administrators can watch for devices with risky data sharing apps, are roaming, out of compliance, or whatever is important to operate effectively in your organization. Administrators can click on the individual items to see the devices that are out of compliance for quick and easy follow-up.

Device View & Custom Attributes

MaaS360 also presents all of the data collected about a device in a single location called the Device View. Ideal for troubleshooting and help desk workflows, administrators can browse through Hardware Details, Apps Installed, Network Information, Security and Compliance Statistics and much more about a single device. Administrators can also create and populate custom attributes, such as whether the device is corporate or employee owned, to better align IT with the business.

Device ID	Device Name	Device Type	Device Status	Device Location	Device Last Seen	Device OS Version	Device App Version	Device Security Status	Device Compliance Status
1234567890	John Doe's iPhone	iOS	Active	New York, NY	2023-10-27 10:30:00	15.0	1.0	Compliant	Corporate
0987654321	Jane Smith's Android	Android	Active	Los Angeles, CA	2023-10-27 09:15:00	12.0	2.0	Non-Compliant	Employee
1122334455	Bob Johnson's iPad	iOS	Inactive	Chicago, IL	2023-10-26 18:00:00	14.0	3.0	Compliant	Corporate

Smart Search & Grouping

MaaS360's Smart Search technology allows administrators to perform custom complex queries across any combination of attributes in the system to produce a report of devices. Reports can be customized and exported. Results can also be saved as a Device Group for use in assigning policies, distributing apps and documents, or performing bulk actions. Administrators can easily put all employee-owned iOS devices in one policy, while keeping corporate devices in another.

MaaS360 Platform Overview

What Sets MaaS360 Apart

MaaS360 lets you instantly provision, secure and manage today's expanding suite of mobile devices—all from a single portal—while minimizing risk to the enterprise. We make the complex world of mobility simple by giving you complete visibility and control across the entire mobile environment, regardless of the device or location, and without the burden of a large financial investment.

Our cloud-based technology and delivery model are the foundation for our unique mobility-as-a-service platform. Managing over one million devices for more than 700 companies around the world, MaaS360 reinvents the way IT cost-effectively supports their expanding mobile workforces. We've managed enterprise mobile computing devices for over a decade, and our best practices accelerate deployment, eliminate risk and simplify enterprise device management for you.

Enterprise mobility management by user, device, application, and across your enterprise is the only way to gain a true 360° view of mobility, so you can take action with just a few clicks. With MaaS360, you get all this in a single solution:

- Comprehensive management of all mobile device types and OS platforms including iOS, Android, BlackBerry, Symbian, and Windows Phone
- Complete coverage of the entire lifecycle—from OTA configuration to advanced security, automated compliance, mobile application management and secure document sharing
- Separation of personal and corporate data protects employee privacy without increasing risks of a data breach
- Clear interface, reporting and analytics for complete visibility and control over mobile devices, applications, and data
- Cloud model provides fast deployment, no fuss maintenance, effortless scaling, automatic updates, and unmatched affordability
